Concept for the Central Asia Regional Economic Cooperation (“CAREC”) Energy Reform Atlas

**Prepared for:
The Asian Development Bank (“ADB”)**

Agenda

1

Overview of the Atlas and guiding principles

Survey of sample website layouts

2

Envisioned Atlas structure and navigation

Geographical navigation

Topical navigation

3

Additional suggestions for website features

The Atlas will be the online delivery vehicle for the Tariff Reform Toolkit and Manual on Unbundling, and other reports

Goals of the CAREC Energy Reform Atlas

To serve as a virtual toolkit containing practical guides on tariff reform, unbundling of state-owned enterprises, and the protection of vulnerable customers

To curate a library of content and knowledge, with hands-on answers to the typical dilemmas policymakers face during the reform process

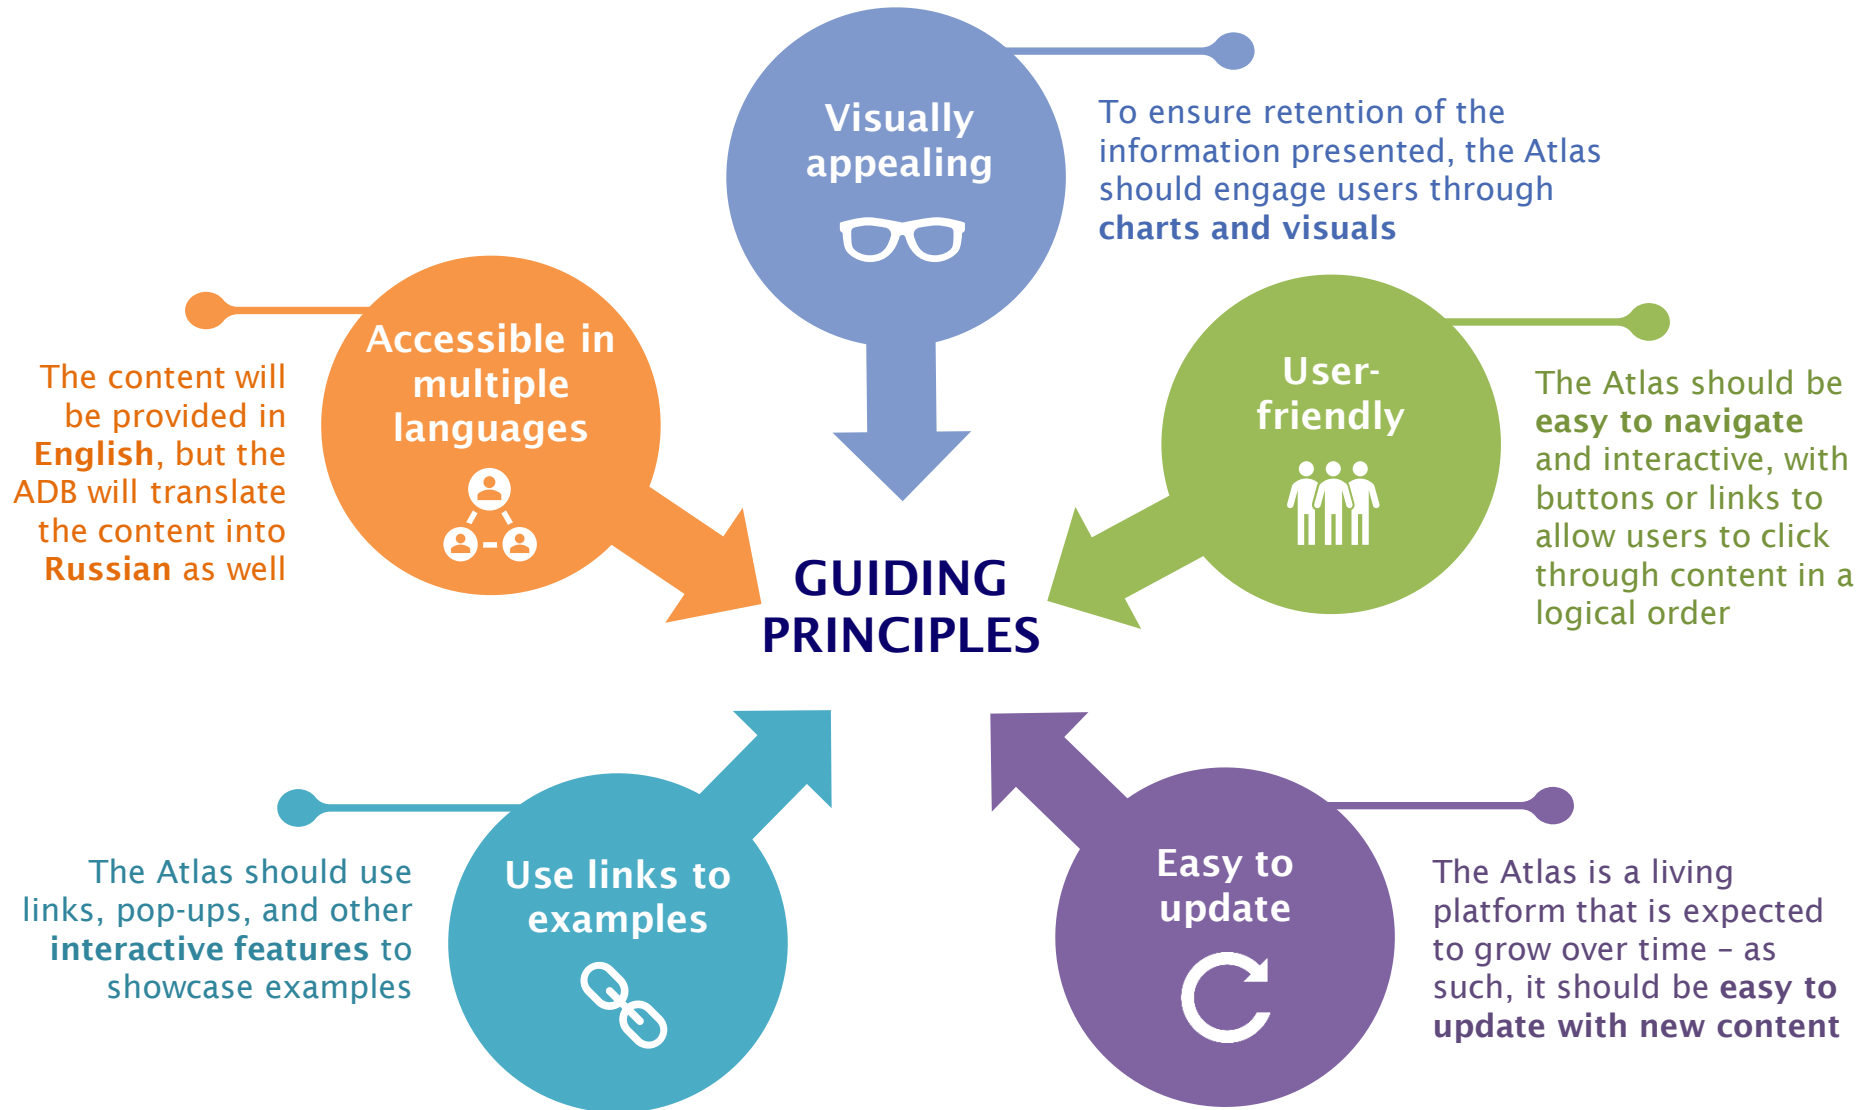

To stimulate online engagement through interactive features, logical navigation, and a user-friendly layout

The following presentation outlines a **robust concept for the CAREC Energy Reform Atlas**, including:

- ideas regarding the structure and basic layout of the platform;
- suggestions for website features; and
- examples and inspiration from the websites of organizations and academic institutions that are active in the energy space

The proposed visual concept is guided by five principles to ensure the Atlas is both engaging and informative

Agenda

1

Overview of the Atlas and guiding principles

Survey of sample website layouts

2

Envisioned Atlas structure and navigation

Geographical navigation

Topical navigation

3

Additional suggestions for website features

The purpose of the following survey is to examine the best practices for energy sector web design

► To guide the design of the CAREC Energy Reform Atlas, we surveyed the websites of notable entities in the energy space

- Goal of the survey was to examine the features of website design that could be incorporated into the concept for the Atlas

► Structure of the survey is as follows:

- We present several screenshots of each website in the following slides, annotated with notable features and design choices
- Links to each website are provided for further browsing
- The final slide of the survey summarizes the observed best practices across the websites reviewed, focusing on visual tools and features

Websites included in the survey

US Energy Information Administration ("EIA")

The EIA "collects, analyzes, and disseminates independent and impartial energy information to promote sound policymaking, efficient markets, and public understanding of energy and its interaction with the economy and the environment."

Columbia Center on Global Energy Policy ("CGEP")

The CGEP at Columbia University "advances smart, actionable and evidence-based energy and climate solutions through research, education and dialogue."

International Renewable Energy Agency ("IRENA")

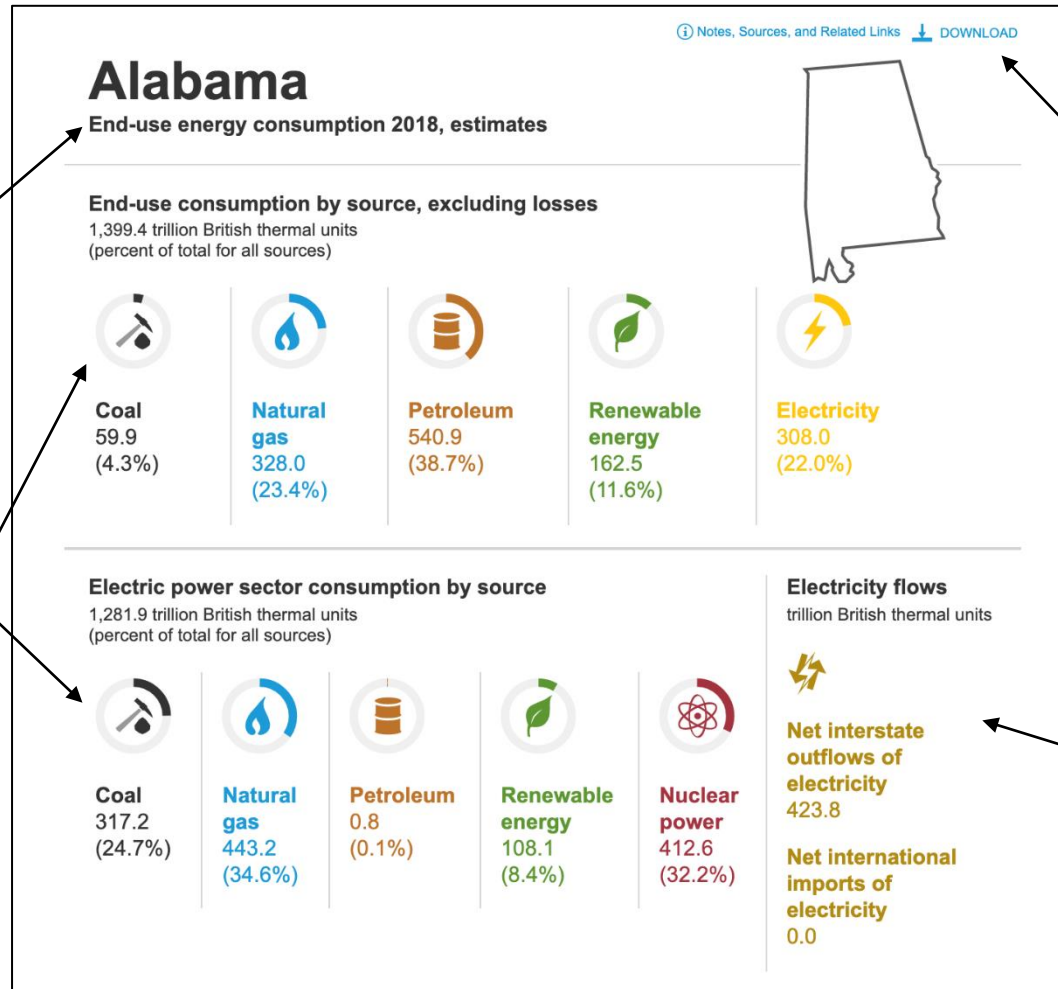

The IRENA "is an intergovernmental organization that supports countries in their transition to a sustainable energy future, and serves as ... a repository of policy, technology, resource and financial knowledge on renewable energy."

International Energy Agency ("IEA")

The IEA "is at the heart of global dialogue on energy, providing authoritative analysis, data, policy recommendations, and real-world solutions to help countries provide secure and sustainable energy for all."

US Energy Information Administration

Easy-to-read, sans serif font, with consistent font size used throughout (only the state name is presented in a large font)

Visually-appealing, graphical depiction of key statistics, with simple yet effective use of icons

Option to download PDF version of information

Effective use of color: black font on white background, colors used to highlight data points

US Energy Information Administration

Key facts
presented in
concise, high-
level bullet points

Facts about Alabama

- Alabama is the second-largest hydroelectric power producer east of the Rocky Mountains, after New York. Twenty three hydroelectric dams provided almost 8% of the state's electricity net generation in 2019.
- In 2019, Mobile was the largest port of entry for U.S. coal imports by volume and the third-largest port for coal exports. About three-fourths of the coal mined in Alabama is exported.
- Alabama is the fifth-largest generator of electricity from nuclear power in the nation. The Browns Ferry nuclear power plant, with three reactors, is the second-largest U.S. nuclear electric generating facility after Arizona's Palo Verde nuclear power plant.
- Alabama has about 4% of U.S. total wood pellet production capacity, including one wood pellet manufacturing plant that uses peanut hulls as feedstock.
- Alabama is the fifth-largest producer of electricity from biomass in the nation, and the state ranks third in timber acreage among the Lower 48 states.
- Last Updated: July 16, 2020

Law on Environmental Information

Last updated: 23 December 2020

Country

Turkmenistan

Year

2020

Status

In force

Jurisdiction

Unknown

Provides the public with a right to access to environmental information, which includes information generated as a result of monitoring and measurements for environmental protection purposes. The public may request information from the holder, which may be a government institution or a private entity.

The Law is intended to implement the UNECE Convention on Access to Information, Public Participation in Decision-making and Access to Justice in Environmental Matters, usually known as the Aarhus Convention.

DRAFT: PRIVILEGED & CONFIDENTIAL

Websites surveyed had common characteristics in terms of navigation, visuals, layout, and other features

Elements

Best practices

Examples

Navigation

- Allow users to access information on relevant jurisdictions through map view
- Organize knowledge materials by country/region, topic, publication type

Visuals

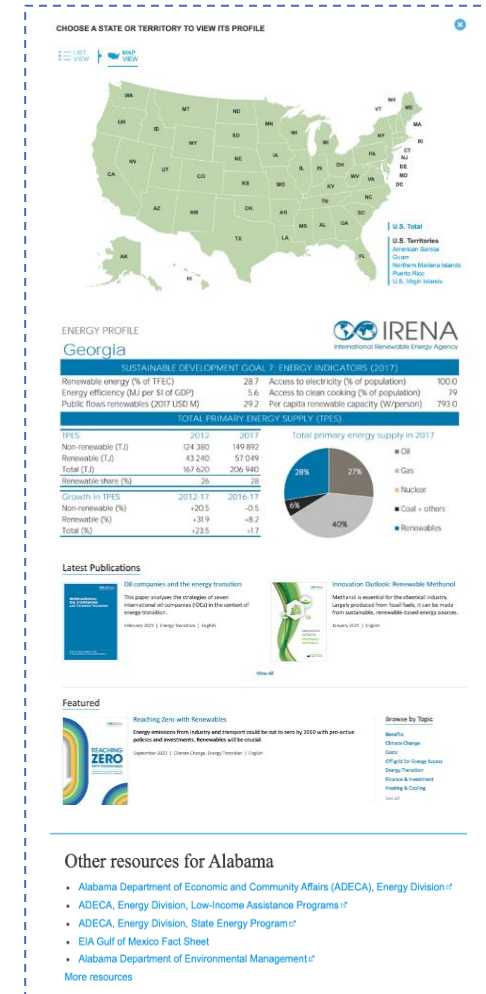

- Use easy-to-read, sans serif fonts on white or color-contrasting backgrounds
- Provide data and key statistics through both written (table, narrative) and graphical (graph, infographic) formats

Layout

- For jurisdictional profiles, present headline statistics first followed by key facts/analysis
- Separate section for knowledge materials, with key publications/recent materials highlighted
- Integrated layout, with links in one section taking users to more detailed information on another part of the website

Other features

- Offer PDF versions of fact sheets and knowledge materials
- Provide links to policies, government websites, and other relevant resources

Agenda

1

Overview of the Atlas and guiding principles

Survey of sample website layouts

2

Envisioned Atlas structure and navigation

Geographical navigation

Topical navigation

3

Additional suggestions for website features

Users will be able to navigate most of the content via one of two means, either by country or by topic

Geographical navigation

- ▶ Allows users to browse content by country or region
- ▶ Optimized viewing for report content related to jurisdictional scans and case study examples
- ▶ Content can be built out and curated by the ADB over time for each country; for this engagement, we will provide basic information for most countries, and detailed information for the six case studies in the reports

Topical navigation

- ▶ Allows users to browse content by topic or area of interest (initially this will include tariff reform, unbundling, and vulnerable customers)
- ▶ Optimized viewing for report content related to theory and proposed implementation approaches
- ▶ Can include high-level summaries, as well as detailed information in separate pop-ups, to make content digestible

Agenda

1

Overview of the Atlas and guiding principles

Survey of sample website layouts

2

Envisioned Atlas structure and navigation

Geographical navigation

Topical navigation

3

Additional suggestions for website features

Case studies will be selected to exemplify each of the major approaches to tariff reform and unbundling

Tariff reform categories

Cost of service (“COS”) framework

Traditional form of utility regulation, where changes in rates are linked to an evolution in underlying costs

Standard performance-based ratemaking (“PBR”)

A regulatory approach that aims to provide incentives for regulated utilities to improve efficiency

Next generation PBR

Assesses regulated utilities’ performance in broad categories against a set of expected outcomes

Unbundling categories

Corporatization

Financial unbundling at the accounting level, while ownership and governance of the entity remains unchanged

Partial unbundling

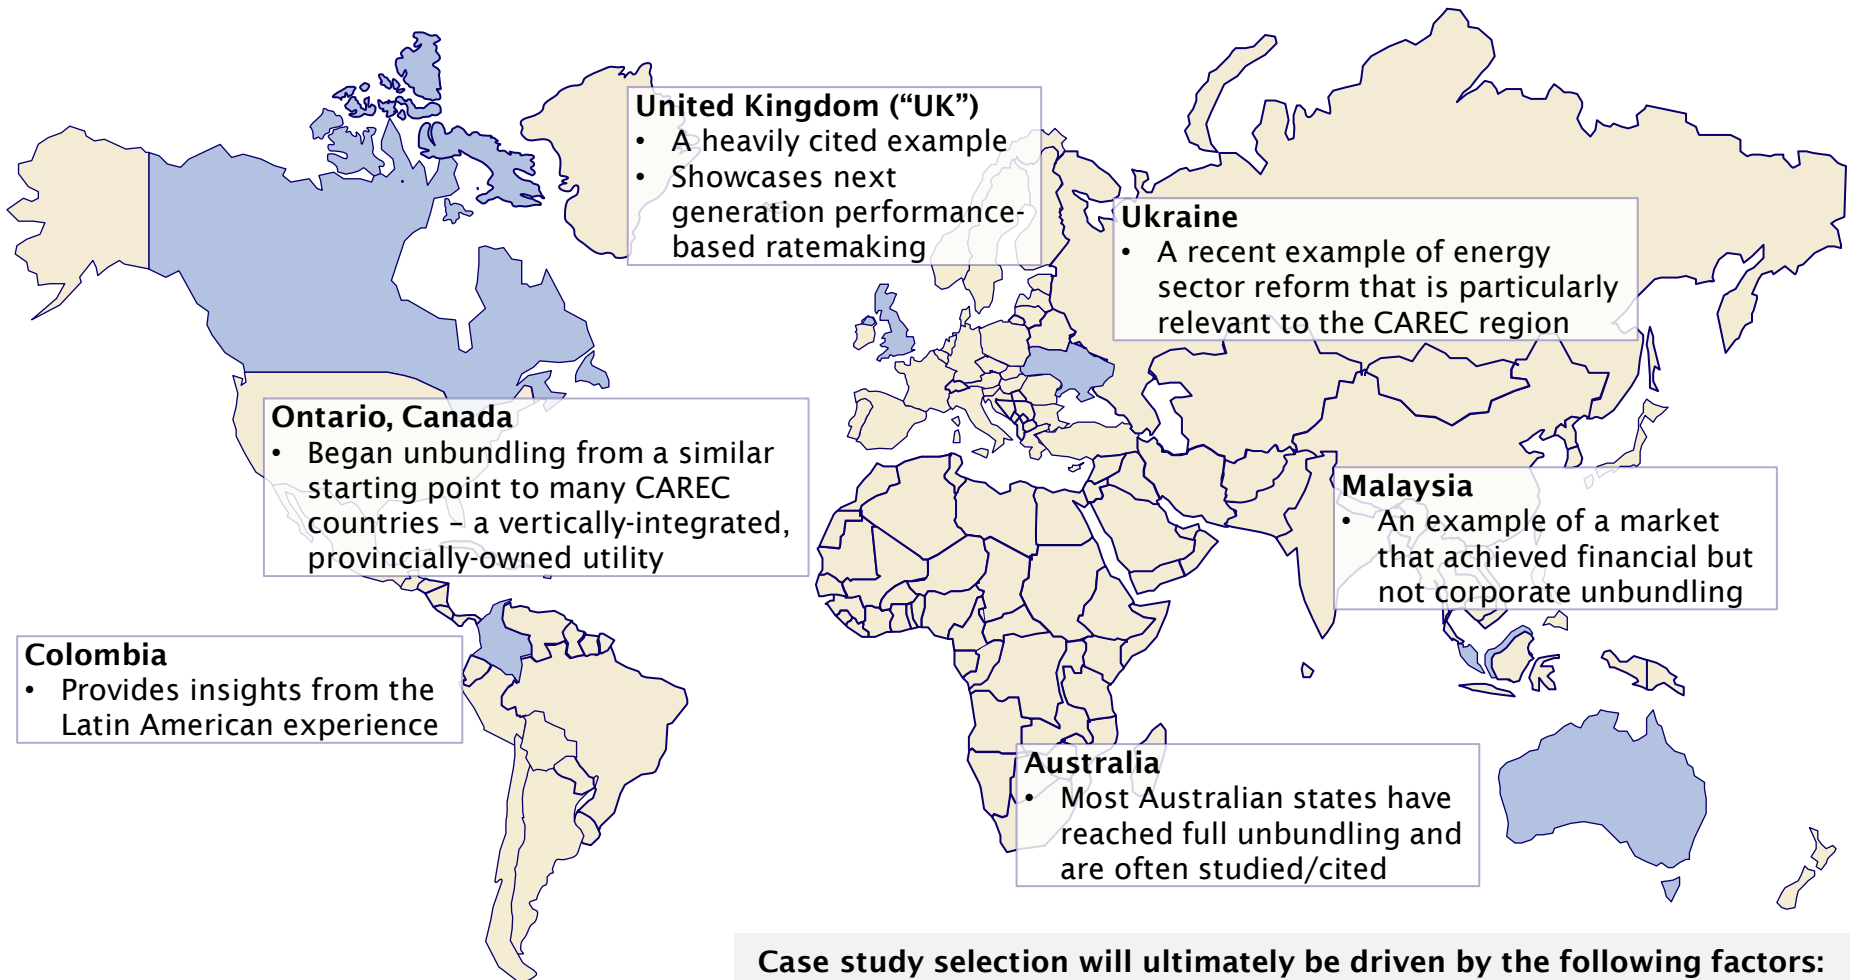

Involves corporate unbundling of some business functions (e.g., competition introduced among generation, but not wires)

Full unbundling

Privatization where separate companies are created at each segment of the electricity value chain

Note: We will attempt to sort all countries into these high-level categories, although some will be at an even earlier stage of development (e.g., countries with non-cost recovery tariffs, or those where the unbundling process has not yet started)

Content will be provided most extensively for the six case studies, which will be selected in collaboration with the ADB

 **Preliminary case studies** to be included in the Tariff Reform Toolkit and Manual on Unbundling

Case study selection will ultimately be driven by the following factors:

- Appropriateness for the CAREC region
- Examples from a range of successful to less successful experiences
- Examples from a range of income levels
- Citation space (e.g., UK and Australia are often cited in literature)

Geographical navigation will allow users to get a sense of what's happening in each country regarding energy reform

1. Each country will have the following information:

- ▶ Basic economic indicators (e.g., GDP per capita)
- ▶ Links to the websites of relevant entities in the energy space (e.g., the regulator, ministerial agency, as well as entities involved in the generation, transmission, and distribution sectors)

2. Each CAREC member country will have the following information (in addition to (1) above):

- ▶ A market snapshot (see samples to the right) with key electricity sector statistics and an overview of the sector (e.g., key players, key announced plans)

3. Each case study country will have the following information (in addition to (1) and (2) above):

- ▶ A write up on the evolution of its efforts relating to tariff reform and unbundling
- ▶ Commentary on lessons learned and best practices observed from its experience

Sample market snapshots

	Afghanistan		
			
Economic data	Population (2019) 38,041,754	Per capita income (2019) Absolute: \$507 PPP: \$2,156	Economic growth 2014-2019 CAGR: 4.5% 2021: 4%
Electricity statistics	Net consumption: 6 TWh (2018) Peak demand: 750 MW (2018) Load per capita: 100-150 kWh (2015)	Load growth Historical: 13% CAGR (2009-2018) Projected base case: 5.7%-8.7% CAGR (2013-2032)	Load composition by sector Household: 93%; Commercial: 7%; Government: <1%
Tariff (US cents/kWh)	Residential: 3.2 - 13 Commercial: 16 Industrial: 8.7 - 16		
Capacity	Total (2018) 600 MW (plus significant imports, around 80% of total supply)		
Key players	Regulator Ministry of Energy and Water	Generation Da Afghanistan Breshna Sherkat*	Transmission and distribution T: Da Afghanistan Breshna Sherkat* D: Da Afghanistan Breshna Sherkat*
Key announced plans	* State-owned ** Partially state-owned - 2013 Power Sector Master Plan calls for an increase in the electrification rate from 30% to 81% by 2030 - Major transmission projects: TUTAP, TAP, CASA-1000 - 2017 Renewable Energy Roadmap targets deploying 4.5-5 GW of renewable energy capacity by 2032, and envisions a transition from donor grant-funded renewable projects to a fully-private sector led industry by 2032 - 2015 Electricity Law called for the establishment of an Energy Regulatory Authority, yet to be established		
Belt and Road Initiative	No Belt and Road initiatives recorded		

	Uzbekistan		
			
Economic data	Population (2019) 35,580,650	Per capita income (2019) Absolute: \$1,725 PPP: \$7,308	Economic growth 2014-2019 CAGR: 23.6% 2019-2025 CAGR: 13.5%
Electricity statistics	Net consumption: 49.20 TWh (2018) Load per capita: 1.47 MWh (2018)	Historical load growth: 2.9% CAGR (2014-2019) Projected peak demand growth: 4% (2016-2022)	Load composition by sector Industry: 40%; Residential: 23%; Agriculture: 20%; Utility: 13%; Transport: 3%; Construction: 1%
Tariff (US cents/kWh)	Residential: 3 Other: 4		
Capacity	Total 12,803 MW		
Key players	Regulator Ministry of Energy	Generation State-owned thermal power plants	Transmission and distribution T: National Electric Networks of Uzbekistan* D: Regional Electric Networks*
Key announced plans	* State-owned ** Partially state-owned - Plans for privatization (Law on the Use of Renewable Energy Sources and the Law on Public-Private Partnerships as well as the Regulations for Connecting Businesses that Produce Electricity, Including from Renewable Energy Sources, to the Unified Electric Power System) - Uzbekistan is a large producer of natural gas (60 bn cubic meters annually)		
Belt and Road Initiative	BRI's China, Central Asia, West Asia Economic Corridor: linking to Kazakhstan, Kyrgyzstan, Tajikistan, Uzbekistan, Turkmenistan, Iran, and Turkey.		

Agenda

Overview of the Atlas and guiding principles

Survey of sample website layouts

2

Envisioned Atlas structure and navigation

Geographical navigation

Topical navigation

3

Additional suggestions for website features

Topical navigation will allow users to focus on content related to their area of interest

1. **Content will initially cover the following topics:**
 - ▶ Tariff reform (see indicative table of contents for the report to the right)
 - ▶ Unbundling
 - ▶ Consumer protection
2. **Additional topics can be added to the Atlas through possible future ADB initiatives**
3. **Navigation can be organized according to the headings included in each report**
 - ▶ e.g., for the Tariff Reform section of the website, there can be separate pages for “tariff design basics” or “key takeaways”
4. **Proposed implementation approaches can be presented visually through a “digital roadmap”**
 - ▶ See the following two slides for examples
 - ▶ The main page of the roadmap would include a winding road with signposts differentiating each “step” in the approach, along with a high-level summary; users could then click on each “step” for more information

4.14	STEP 12: DEVELOP FORMULAS FOR RATE ADJUSTMENTS WITHIN REGULATORY PERIODS6
5	CONCLUDING REMARKS AND KEY TAKEAWAYS.....6

Digital roadmap concept applied to the 12-step tariff reform implementation approach

Implementing tariff reform

Step 1:
Determine underlying cost structure

1

Step 2:
Calculate appropriate cost of capital

2

Step 4:
Determine whether customer classes reflect cost causation; if necessary, redefine customer classes and reallocate cost recovery

4

Step 5:
Examine billing determinants and block design for economic efficiency; evolve if necessary

5

Step 6:
Determine role of productivity incentives and performance standards

6

Step 7:
Develop a lifeline tariff

7

Step 9:
Explore the necessity of line loss provisions

9

Step 12:
Develop formulas for rate adjustments within regulatory periods

12

Step 8:
Assess collection issues

8

Step 10:
Describe how tariffs are revised and investments approved

10

Step 11:
Determine the appropriate length of regulatory periods

11

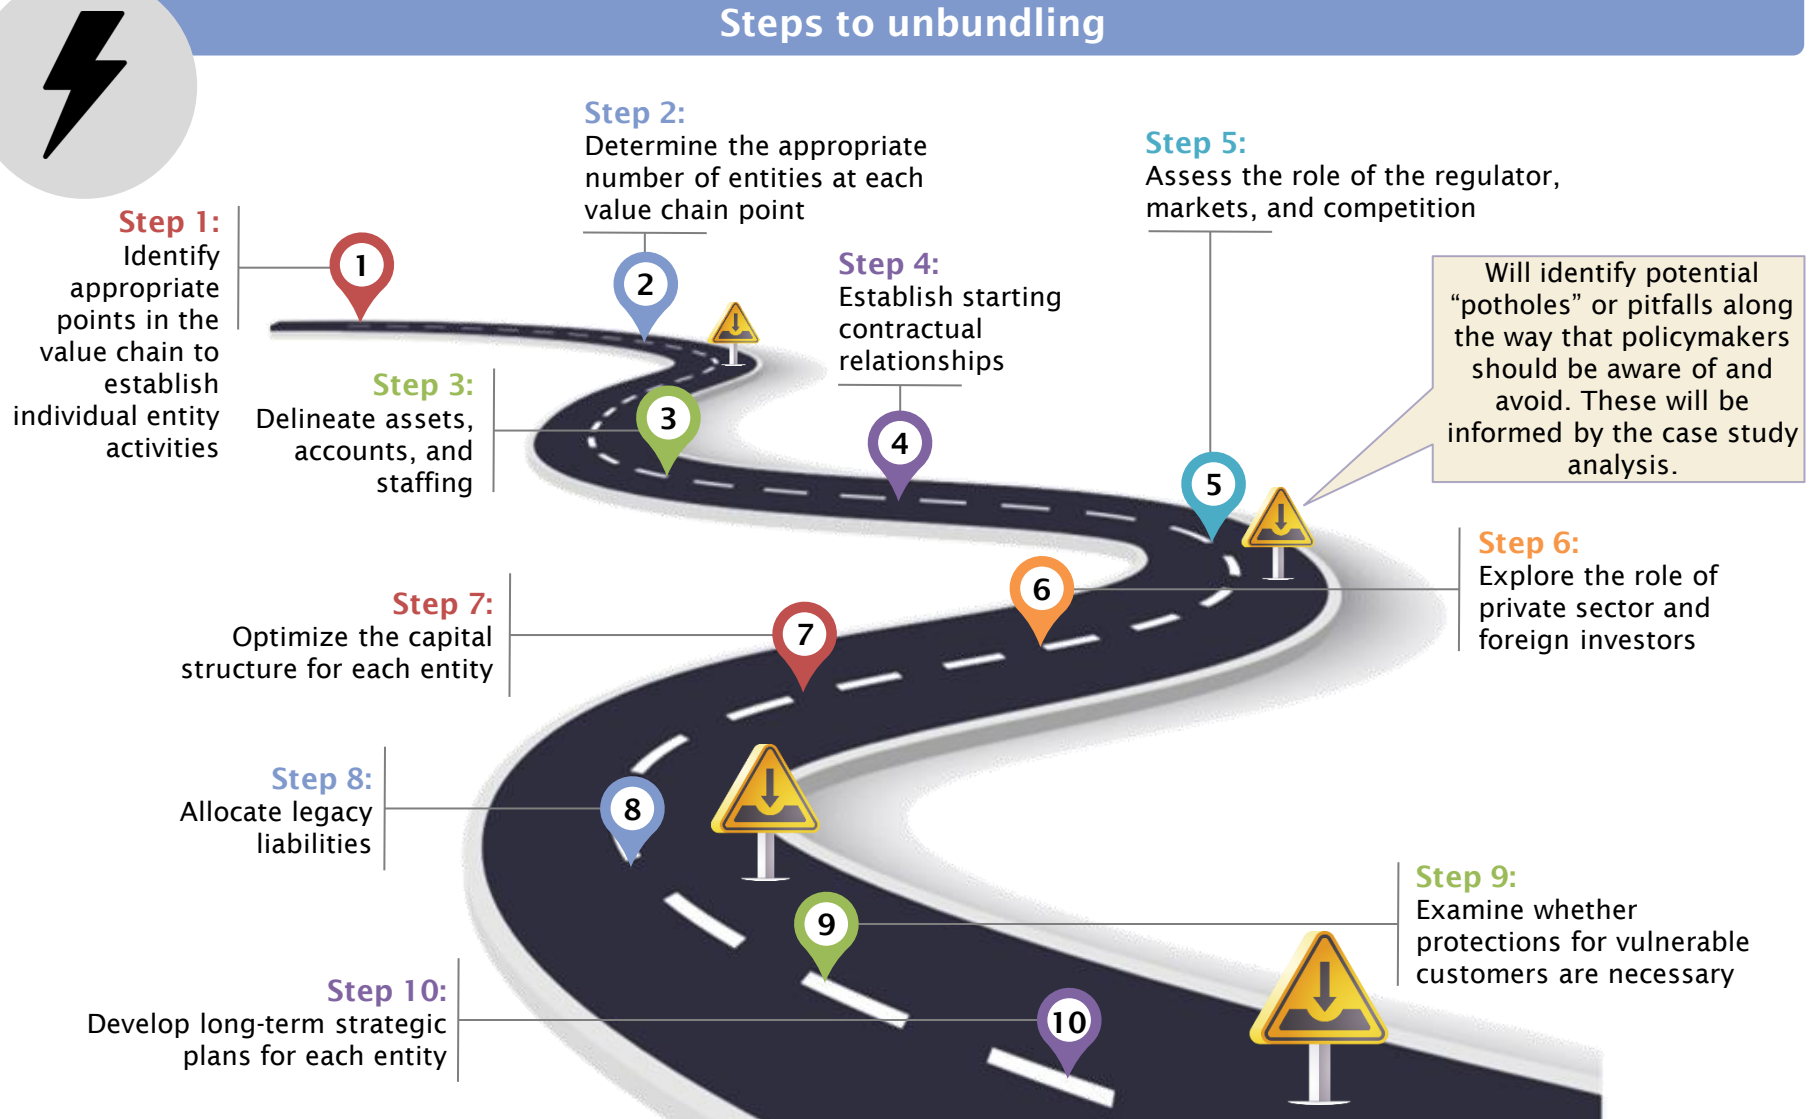

Step 3:
Assess whether existing tariff is cost reflective; if not, determine approach to reach cost recovery

3

Will identify potential "potholes" or pitfalls along the way that policymakers should be aware of and avoid. These will be informed by the case study analysis.

Digital roadmap concept applied to the 10-step unbundling implementation approach

Steps to unbundling

Agenda

1

Overview of the Atlas and guiding principles

Survey of sample website layouts

2

Envisioned Atlas structure and navigation

Geographical navigation

Topical navigation

3

Additional suggestions for website features

Additional website features should provide users with ways to access further related information

PDF download option

Users should be able to download PDFs of the complete reports (e.g., Tariff Reform Toolkit, Manual on Unbundling) for later use

Suggestion box

Users should be able to suggest new topics to be added to the Atlas, through some type of submission form

Landing page for EIF content

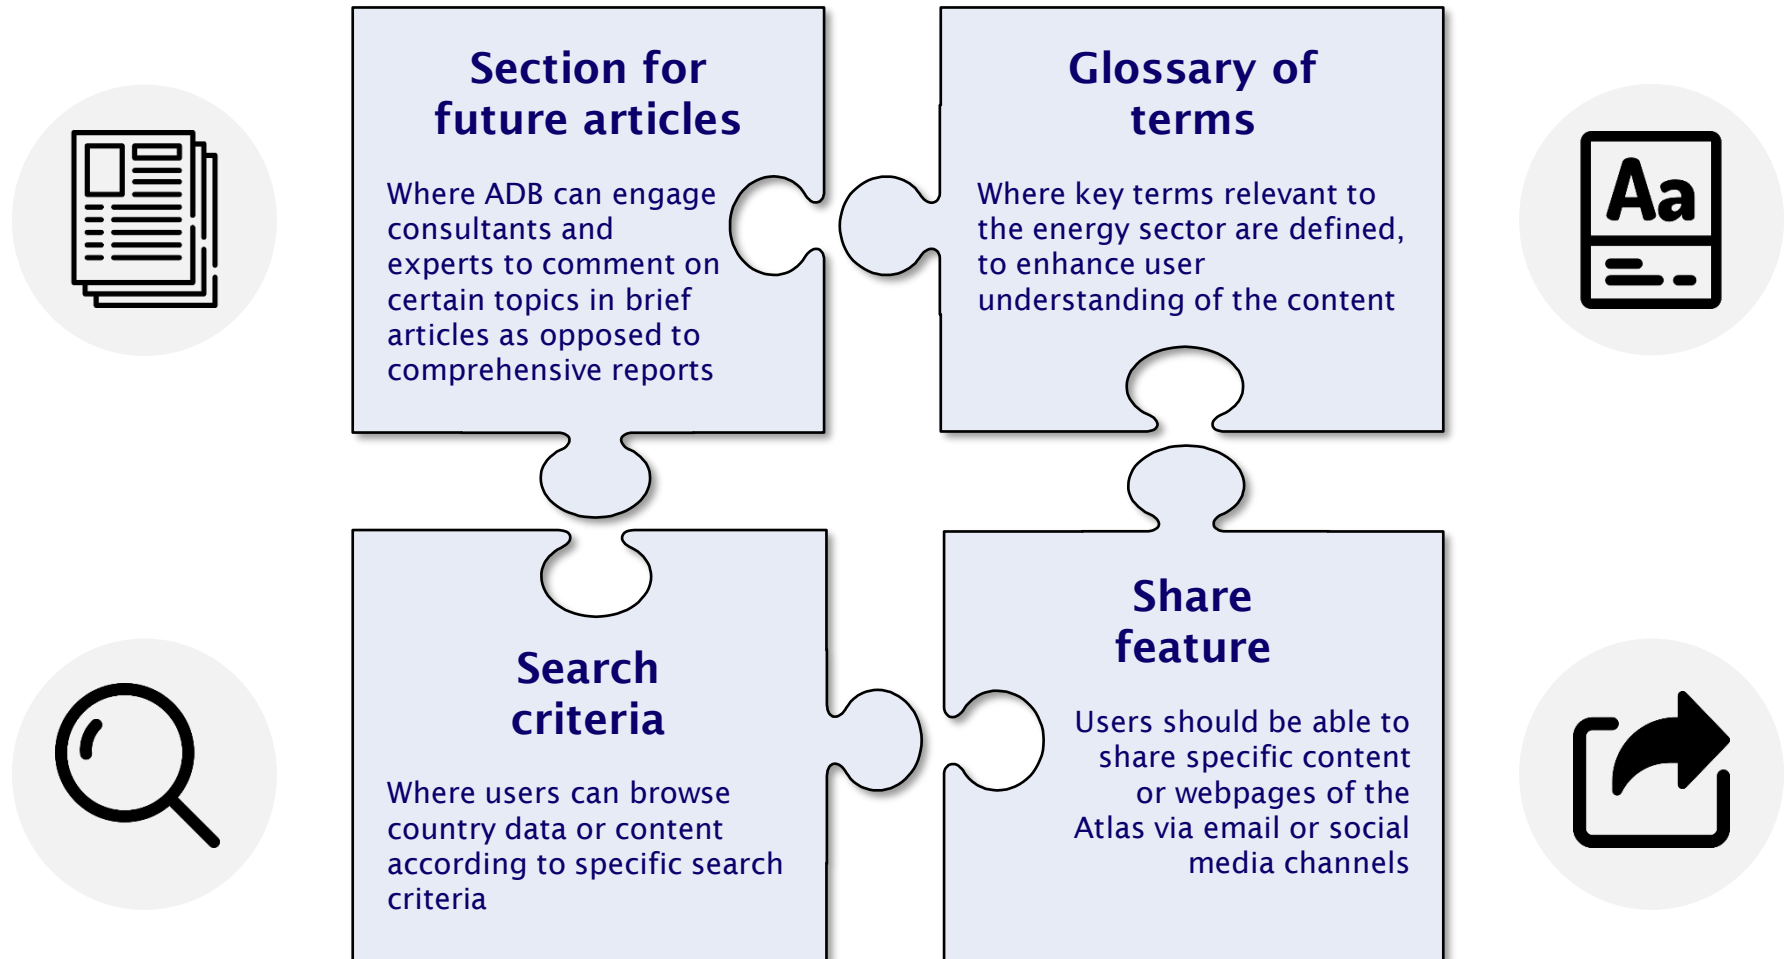

Users should be able to access content from previous and future EIFs (e.g., conference agendas, programs, slides)

Document library

Users should be able to access resources used to inform the reports – this can be formatted on a single webpage as a bibliography with links

Additional website features should provide users with ways to access further related information

Additional website features should provide users with ways to access further related information
